OUR TIPS FOR A SUCCESSFUL RESTART

Dear customers!

The **anticipation for the upcoming winter** is rising - among skiers, vacation guests, children and adults, and probably **among you as well as us!**

In less than three months, the lifts will finally be moving in the snow again and transporting mountain sports enthusiasts to skiing fun.

We have two tips ready for you for a good start into the winter:

1. Order your installation check in time

We suggest to start taking care of your installations **even before the first snowfall and check them** - the sooner the better:

Turn on your installation

Check, if everything is OK

In case of errors or malfunctions, call your account manager

Our technicians will help you.

The installation will run – and you will be ready for winter!

Our technicians are happy to help you, but also in high demand - so it's worth **requesting your electrical and mechanical ropeway checks now!**

If you have any questions or need more detailed information, don't hesitate to contact your account manager who is always available.

On the next page you will find our advice for the proper lubrication of your installation.

2. Lubrication is the key

As ropeway operators, you know how **important proper maintenance** and servicing of your installation is.

The correct application of the suitable lubricants can play a decisive role in this.

With the **right lubricant**, you **can improve the performance** and **extend the service life** of your installation.

We are pleased that together with **Klüber Lubrication** we have been able to select a **range of lubricants whose quality convinces** us as a leading ropeway manufacturer and service provider.

If you would like **individual consultation or training** on the subject of “lubricants”, please contact your **LEITNER account manager** at any time. Together with the **experts of Klüber Lubrication** we will prepare a **suitable programme and the right product package** for your installation.

Kind regards
LEITNER Customer Service
