Cabarceno I + II

Cabarceno – ES – 2016

Length	4.900 m (3831 + 1069)
Height difference	389 m (288 + 101)
Throughput per hour	1.250
Vehicles	60 (38 + 22)
Power (kW)	335 + 168
Towers	28 (22 + 6)

Since September 2016, visitors to the Cabárceno Nature Park in the Northern Spanish province of Cantabria can enjoy a view of the immense zoo from above. The panoramic windows of the gondola lift allow an unrestricted view of the animals. Cabins with glass floors are a special attraction. The ropeway consists of two independent gondola lifts.

One forms a triangle with three angle stations. One of this ropeway's special features is that each of the 22 support towers only has a roller battery on one side. That means that the 38 gondolas only run counter-clockwise on one side of the support towers. The ropes were partially pulled with a drone to avoid disturbing the animals.
