Dorfbahn Gerlos I +II

Gerlos – AT – 2016

Length	2.600 m (1134 + 1466)
Height difference	816 m (322 + 494)
Throughput per hour	2.413
Vehicles	79 (38 + 41)
Power (kW)	418 + 510
Towers	23 (11 + 12)

Since winter 2016/17, guests have been able to travel directly from the village of Gerlos in the Zillertal valley to the ski resort on the Isskogel mountain. Thanks to the new “Dorfbahn” 10-passenger gondola lift, guests no longer have to take the bus to the valley station for the Isskogel gondola lift around 1.5 km away.

The location of the new monocable gondola lift in the center of Gerlos not only means more convenient access to the skiing resort for winter sports enthusiasts, but also reduces ski bus and individual traffic both in the village and on the main road.
